

Your competitors are already shipping faster than you.

Every hour your team spends writing tests, debugging broken ones, or firefighting production issues is an hour they're not building. **Maeris automates your entire quality process** — so your team ships more, breaks less, and never gets blindsided.

UI Testing

manual setup needed to get started

WHAT MAERIS DOES

One platform. Every quality check.

01 Writes & runs tests for you Reads your real codebase. Generates tests that cover actual user flows — not templates. Runs them automatically with no manual trigger.	02 Self-healing test suite When tests break, Maeris diagnoses the root cause, patches the test, and reruns — without anyone on your team touching it.	03 Full API catalog Every endpoint discovered automatically. Methods, auth, payloads — all documented. No more guessing what's in production.
04 Security scanning OWASP checks, hardcoded secrets, and misconfigurations caught every sprint — not at release time when they're expensive to fix.	05 Accessibility & GDPR WCAG compliance and GDPR violations checked on demand. Pass audits without a separate tool or a dedicated compliance sprint.	06 Team dashboard Push results to a shared view. Track coverage, security posture, and compliance across every sprint — with no manual reporting.

WHY IT MATTERS

The cost of waiting is higher than you think.

A bug in production costs **10× more** than one caught during development

By the time your customers see it, the damage is done — to trust, to revenue, and to your team's time. Maeris surfaces issues during the sprint, when a fix takes minutes, not days.

Every week without coverage is a week of **compounding risk**

Untested features, undetected vulnerabilities, undocumented APIs — they don't stay invisible. They surface at the worst moment. A customer demo. An audit. A launch.

Your best engineers **shouldn't be debugging** test scripts

Manual QA is expensive and slow. Maeris handles the repetitive work automatically — so your team focuses on what actually moves the product forward.
